Predictive Supply Risk Management by Tredence

Industry-specific solution developed by Tredence and powered by the Databricks Lakehouse Platform

Power your supply risk decisions

Customers today are faced with multiple supply risks including lack of in-transit visibility, disruptions caused by weather, and local events, among others. Tredence's Predictive Supply Risk Management solution, built on the Databricks Lakehouse Platform, helps businesses meet supply risk challenges by providing a scalable, cloud-based solution that can be tailored to the specific needs of each organization. The platform's flexibility and scalability allow businesses to keep pace with changing regulations and customer demands, and its comprehensive suite of tools helps identify and mitigate risks across the enterprise. Benefits of the Tredence Predictive Supply Risk Management solution are:

- Predicts order delays, identifies root causes and quantifies supply chain impact
- Provides real-time visibility with delay alerts using external and internal data
- Delivers prescriptive models and simulation to mitigate risks
